

MILLIONS AGAINST MANDATES

Vaccines- Where Do We Go From Here?

By Amy Gordon, Co-Director of Millions Against Mandates

You are not alone as millions of people, including some who never considered themselves anti-vaxxers, are wondering about “safety and efficacy.” A deep mistrust in the CDC and other agencies has been created after their misinformation and lack of transparency.

The following are but a few of the un-mainstream media and scientific experts who are changing their minds about vaccinations. Popular podcaster Joe Rogan got curious and started “doing his own research” despite the July 2020 warning against that from Forbes Magazine. After reading *Dissolving Illusions*, Rogan has some questions. “It’s widely credited that the polio vaccine is what stopped that (epidemic). I used to wholesale believe that until this pandemic and now I question everything...I have a feeling that there’s a lot more to the story than what the general narrative is that we’ve been given, that vaccines are this amazing cure.” <https://bit.ly/3rco2hJ>

Dr. Peter McCullough, one of the most published and distinguished cardiologists in the world (and formerly pro-vaccine), realized the lies and shoddy state of vaccine research and gave us this warning in his recent substack article. <https://bit.ly/3XDQuF5> The brave and brilliant Dr. Pierre Kory speaks about his path on awakening to the massive fraud and damage from the vaccine program in this 38-minute interview. <https://bit.ly/3XEe8S2>

Our belief in vaccines has become an article of faith in modern society since the 1950s. We are reminded in textbooks and debates that the only thing that saved us from the scourge of polio was the polio vaccine. The story continues from there with a vaccine for any and every “deadly disease.” All the vaccines are “safe and effective.” If you dare to question anything, you are viewed as an uneducated pariah. Look at the blowback to Rogan for merely asking the questions.

Why do we believe so strongly in vaccines? Why do we get so angry when anyone questions them? We humans fear death, although it is the inevitable endpoint for all of us. Vaccines were dangled before us as the only antidote and holy grail for disease. Therefore, we need to believe in vaccines, repeating the mantra “safe and effective” in an unquestioning and prayerlike manner. If you question vaccines, you are attacking “our savior.” If you remove the belief, all that remains is the fear of death.

How did we come to believe so strongly in vaccines? It is something that is so deeply ingrained in our educational systems and our psyches that it has become “settled science,” a term that Toby Rogers considers to be a logical fallacy. Rogers explains logical fallacy in

his recent substack article, The Logical Fallacies that have killed the most people over the last three years. <https://bit.ly/3XAKLA6>

Consider the following devastating facts about the pharmaceutical industry and vaccines:

According to Robert F.Kennedy Jr, “The Media is now an extension of the pharmaceutical industry. 75% of advertising revenue are now coming from pharma – and that ratio is even higher for the evening news. Anderson Cooper has a \$12 million a year annual salary. Well, \$10 million of that is coming from Pfizer. So his boss is not CNN; his boss is Pfizer.” Pharma advertising money completely buys the way a research article is positioned in the journals. <https://bit.ly/3D3DsqU>
The vaccine industry gives millions to the American Academy of Pediatrics for conferences, grants, medical education classes and even helped build their headquarters. The totals are kept secret, but public documents reveal bits and pieces. <https://bit.ly/3NX3JO8>

In 2016, The Hill published a letter sent by "more than a dozen" senior Centers for Disease Control (CDC) scientists charging the agency with nursing an atmosphere of pervasive research fraud. <https://bit.ly/3PHQ66F>

Pfizer alone has a long history of corruption. <https://bit.ly/46wBqxc>

Pause for a second and breathe. Maybe you are thinking “Now what do I do? Die of disease or just keep taking the vaccines?” What if there is more to the story? Where would I find it?

These are good places to start:

A brand new presentation from Millions Against Mandates “The Toxic Truth About Vaccines.” [\(INSERT LINK\)](#)

This will be followed at a later date by an extensive research-laden review on the entire vaccination program.

37 years of fraud, corruption and greed – how we actually got to the covid vaccine fiasco! This has to be the most accessible, clear and understandable presentation ever created on this topic by Attorney Aaron Siri. <https://bit.ly/3ppPdoM>
